

SurReset User Manual

Platform: ILIAS

Plugin: SurReset

1. What is SurReset?

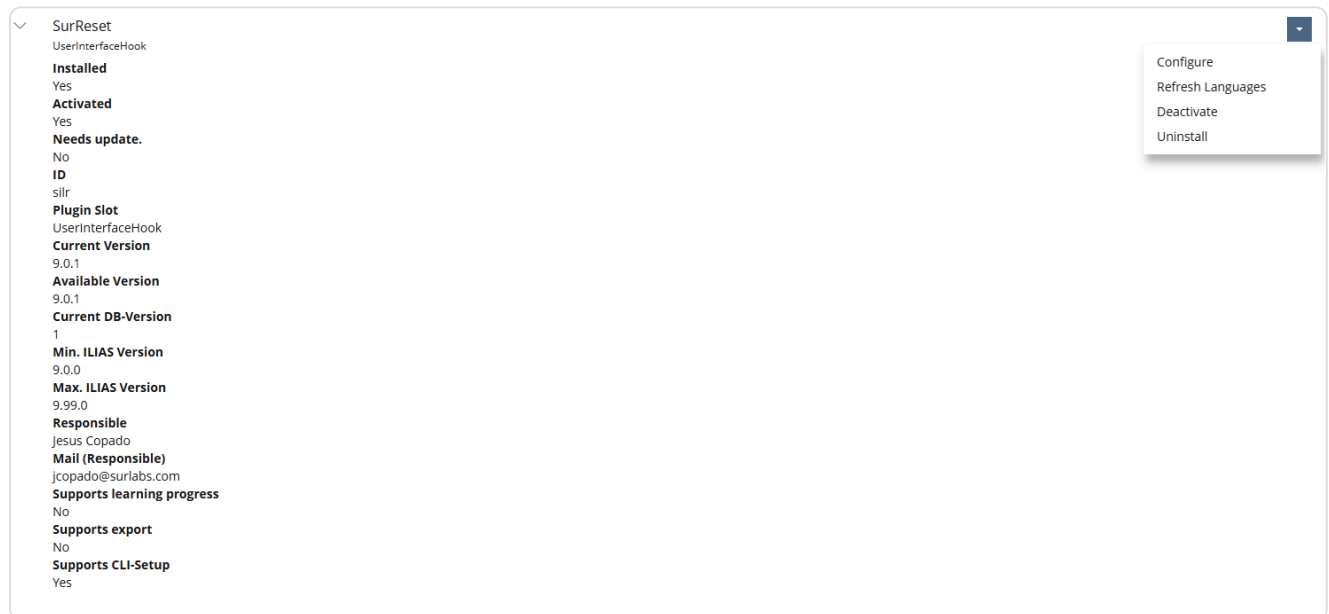

SurReset helps you reset learning progress for selected learning areas on a planned schedule.

You can use it to:

- Reset progress manually when needed.
 - Set automatic reset schedules.
 - Choose who is affected by each reset.
 - Check what was executed and when.
-

2. Open SurReset Configuration

1. Go to **Administration > Plugins**.
2. Find **SurReset**.
3. Open the plugin configuration page.

3. Activate or Deactivate the Plugin

- Click **Activate** to enable SurReset.
- Click **Deactivate** to disable it.

When active, you can create and run schedules.

4. Create or Edit a Schedule

Create

1. Open SurReset.
2. Click **New schedule**.
3. Complete:

- **Name**
- **Objects** (where reset will apply)
- **Users** (who will be affected)
- **Frequency** (manual or automatic)
- Optional **email notification**

4. Save.

Schedule list with edit action.

5. Run a Schedule Manually

1. In **List**, select **Run**.
2. Confirm execution.
3. Optional: write a notification subject/message.
4. Wait for success message.

Are you sure you want to run this schedule? See more information below.

Notification subject (Optional)

Manual notification (optional)

If you want to send a manual notification to the users, you can write a message here, leave it empty if you don't want to send a notification. You can use the following placeholders: [login] for the username, [name] for the user's full name, [first-name] for the user's firstname and [lastname] for the user's lastname.

Manual run confirmation view.

6. Automatic Execution

Automatic schedules are executed by ILIAS cron.

What this means:

- If frequency is automatic, SurReset checks when to run.
- If notifications are enabled, SurReset can send emails before execution.

If cron is not running, automatic schedules will not run and the emails neither.

7. Confirm Results

1. Open **Execution History**.
2. Check:
 - Date
 - Method (manual/automatic)
 - Affected users
 - Duration
3. Open details to see affected objects and users.

Execution history and result verification view.

8. Common Problems

Schedule did not run automatically

- Check or ask your administrator to verify ILIAS cron status.
- Confirm the schedule is set to automatic frequency.

Users did not receive notification email

- Check that notifications are enabled.
- Check email subject/template are filled.

I cannot see execution results

- Refresh **Execution History**.
- Check or ask your administrator to check plugin and cron logs.

9. Good Practice

- Use clear schedule names.
- Test with a small set of users first.
- Run manual validation before enabling large automatic schedules.
